PROFESSIONAL SUMMARY

Higher Technician in Multiplatform Application Development (DAM) with Full Stack development experience in a real business environment. Backend in .NET and C# with a layered architecture, frontend in React, and SQL Server as the database. I have developed production modules (role-based access control, file validation and report export) and personal projects with REST APIs, JWT/OAuth authentication and cloud deployment. Currently studying DAW and a Master's in Cybersecurity. Seeking my first position as a junior Full Stack developer.

KEY SKILLS

- **Backend:** .NET, C#, Node.js, Express, PHP, Laravel, Java, REST API, JWT, OAuth
- **Frontend:** React, JavaScript, HTML5, CSS3, Vite
- **Mobile:** React Native, Expo, Flutter, Dart, Kotlin, Android Studio
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB, Prisma ORM, Supabase
- **Tools and DevOps:** Git, GitLab, GitHub, Docker, Linux, Kali Linux, Render, Vercel, Visual Studio, VS Code, IntelliJ IDEA
- **Technical practices:** layered architecture (controller, service, DTO), DAO pattern, RBAC, data validation, audit logs, teamwork with a module-based methodology
- **Languages:** Spanish (native), Valencian (native), English (intermediate)

PROFESSIONAL EXPERIENCE

Full Stack Developer (Professional Internship) | Mercanza | Madrid (remote) **02/2026 - 06/2026**
Internal management application for healthcare mutual insurers (care and health sector). Team of 7 developers organized by modules. Stack: .NET, C#, React, SQL Server.

- Implemented role-based access control (RBAC) in the accreditations module, restricting actions and exports according to permissions and filtering the records visible to each entity.
- Developed a file upload form with validation of the file extension and the actual content of the Excel file, required fields and state management.
- Built the export of reports in PDF and Excel and the download of files associated with each record.
- Created React grids with dynamic filtering and mapping of states to readable text, adapted to the existing design system.
- Migrated hardcoded connection strings and paths to centralized configuration (appsettings.json and secrets.json), and added audit logs.
- Collaborated on a shared repository with Git and GitLab, coordinating branches and resolving conflicts.

FEATURED PROJECTS

GoFight (DAM Final Project) | Boxing training mobile app **2026**
React Native, Expo, Node.js, Express, PostgreSQL, Prisma, Supabase, Render

- Developed, as part of a team, a REST API with more than 20 protected endpoints and Google OAuth login.
- Implemented gamification (streaks and points), user ranking and an admin panel.
- Deployed the backend on Render and the database on Supabase, and distributed the APK with Expo.

ByteStore (Master's Final Project) | Video game web platform **2026**
React, Vite, Node.js, Express, MongoDB, JWT, Vercel

- Developed a catalog with search and filtering, a personal library per user and a review system.
- Implemented JWT authentication, role-protected routes and a custom REST API on MongoDB.

Lampreas Violeta (DAM Project) | Desktop management application **2025**
Java, JavaFX, PostgreSQL, JDBC

- Implemented full CRUD on PostgreSQL with the DAO and DAO Factory patterns.
- Designed an interchangeable dual persistence (relational database and JSON files with Jackson).

EDUCATION

Web Application Development (DAW) + Master's in Cybersecurity | ThePower **2026 - Present**

Higher Technician in Multiplatform Application Development (DAM) and Master's in Full Stack Web Development | ThePower **2024 - 2026**
